SUMMARY OF QUALIFICATIONS

- Fourth-year Computer Engineering student with a foundation in engineering analysis and report-writing skills developed through several years of academic team projects.
- Proficient in Java and Python, with hands-on experience designing, building, and maintaining efficient, reusable code.
- Practical experience applying Agile methodologies and the Software Development Life Cycle (SDLC) to adapt to and execute complex technical projects.

TECHNICAL SKILLS

Languages: Java, Python, SQL, Javascript, HTML, CSS, C, C++, MATLAB

Hardware: Arduino Uno, Altera FPGA, HCS12, Hand Tools, Breadboards, Oscilloscopes, Digital Multimeters

Frameworks & Libraries: JavaFX, JUnit, SQLite, Pandas, NumPy, discord.py

Software/Tools: Git, GitHub, Linux, PostgreSQL, Power BI, Microsoft Office (Excel, Word, PowerPoint)

Methodologies: Software Development Life Cycle (SDLC), Agile, UML Modelling, Object-Oriented Analysis

EDUCATION

Toronto Metropolitan University

Toronto, ON

Bachelor of Engineering (B.Eng), Computer Engineering

2023 – Present

- **Relevant Courses:** Object Oriented Eng Analysis and Design, Engineering Algorithms and Data Structures, Advanced Algorithms, Operating Systems, Software Systems, Principles of Engineering Economics
- Anticipated 2028

EXPERIENCE

Head Counter

April 2022 – September 2023

Sugarhill Desserts

- Proposed seasonal promotional ideas to the manager to attract customers.
- Debugged POS system errors to restore payment processing and sales reporting functionality.
- Assisted in training new staff members in a fast-paced environment.
- Performed inventory stock procedures to maintain inventory levels at all times.

PROJECTS

Personal Finance Optimizer

August 2026

- Engineered an automated ETL data pipeline using Python and Pandas to ingest and clean over 500 raw financial records into a structured SQLite database.
- Designed an interactive Power BI dashboard with customized KPI metrics to track expenses, subscription trends, and monthly cash flow to support data-driven financial decisions.
- Built custom data filtering logic to filter recurring monthly subscriptions from daily expenses, ensuring accurate downstream visualization.

Reminder Bot

June 2026

- Created a Python bot by integrating the Discord API via discord.py and utilizing SQLite, allowing users to create and manage reminders for major upcoming events via chat commands.
- Designed a reminder system to set up automated countdown alerts and notifications directly to specific user accounts.
- Implemented exception handling and input validation to manage invalid user inputs and prevent application crashes.

Bookstore Application

April 2025

- Collaborated with a team to define project scope and develop a reliable, efficient bookstore application using Java and JavaFX.
- Applied Agile methodologies and the SDLC to manage tasks and design an efficient customer membership system.
- Designed UML Use Case diagrams and Class diagrams to model the application architecture and to effectively communicate technical requirements.
